Ticket Lifecycle

A ticket typically goes through these stages:

New

↓

Assigned

↓

In Progress

↓

Pending / On Hold (if waiting for user/vendor)

↓

Resolved

↓

Closed

1. New

- Ticket is created by the user or monitoring system.
- No engineer is assigned yet.

2. Assigned

- Ticket is assigned to the appropriate support engineer or team.

3. In Progress

- Engineer investigates and works on the issue.
- Updates are added to the ticket.

4. Pending / On Hold

- Waiting for:
    - User response
    - Vendor support

- Additional information
- Scheduled maintenance

5. Resolved

- Solution has been provided.
- User is asked to verify the fix.

6. Closed

- User confirms the issue is fixed, or the resolution period ends.
- Ticket is archived.

Ticket Priorities

Priority	Meaning	Example
P1 (Critical)	Business completely impacted	Server down
P2 (High)	Major functionality affected	VPN not working for many users
P3 (Medium)	Partial impact	Printer not working
P4 (Low)	Minor issue or request	Password reset, software installation

---

Good Ticket Handling Practices

- Read the issue carefully.
- Assign the ticket to the correct team if needed.
- Update work notes regularly.
- Communicate clearly with the user.
- Attach relevant logs or screenshots.
- Resolve within the Service Level Agreement (SLA).
- Close only after confirming the issue is resolved.

Example Ticket

Ticket ID: INC0012456

Issue: User cannot log in to VPN.

Lifecycle:

1. User reports VPN login failure.
2. Ticket created (**New**).
3. Assigned to the Network team (**Assigned**).
4. Engineer resets VPN profile (**In Progress**).
5. User tests successfully (**Resolved**).
6. User confirms the issue is fixed (**Closed**).

Jira vs. ServiceNow

Feature	**Jira**	**ServiceNow**
Primary Use	Project & issue tracking	IT Service Management (ITSM)
Best For	Development teams	IT support & enterprise operations
Agile Support	Excellent	Available but less development-focused
Incident Management	Basic to moderate	Comprehensive
Change Management	Available	Comprehensive
Asset Management	Limited (with add-ons)	Built-in capabilities

Understanding the ticket lifecycle and maintaining accurate ticket updates are essential skills for IT support, help desk, and system administration roles
