Ticketing Tools: Jira / ServiceNow Basics & Ticket Lifecycle

Ticketing tools such as **Jira** and **ServiceNow** are used by IT teams to track, manage, and resolve incidents, service requests, bugs, and tasks.

What is Jira?

Atlassian **Jira** is a project and issue-tracking tool commonly used by software development and IT support teams.

Common uses:

- Bug tracking
- Task management
- Sprint planning (Agile/Scrum)
- Incident tracking
- Change management

What is ServiceNow?

ServiceNow **ServiceNow** is an IT Service Management (ITSM) platform used to manage IT services, incidents, requests, changes, and assets.

Common uses:

- Incident Management
- Service Requests
- Problem Management
- Change Management
- Asset Management
- Knowledge Base

Basic Ticket Fields

A ticket usually contains:

- **Ticket ID** – Unique identifier (e.g., INC0012345)
- **Title/Summary** – Short description of the issue

- **Description** – Detailed explanation
- **Priority** – Critical, High, Medium, Low
- **Severity** – Business impact of the issue
- **Status** – Current stage of the ticket
- **Assignee** – Person responsible
- **Reporter** – Person who created the ticket
- **Category** – Hardware, Software, Network, etc.
- **Attachments** – Screenshots, logs, documents
- **Comments/Work Notes** – Progress updates
