If you're looking for **Microsoft Outlook email setup and troubleshooting**, here are the most common methods and solutions.

Set up an Outlook email account

In the Outlook desktop app (Windows/Mac)

1. Open Outlook.
2. Select **File** > **Add Account** (or **Tools** > **Accounts** on some Mac versions).
3. Enter your email address.
4. Click **Connect**.
5. Enter your password when prompted.
6. Complete any two-factor authentication (if enabled).
7. Click **Done**.

Most Outlook.com, Microsoft 365, Gmail, Yahoo, and Exchange accounts are configured automatically.

Set up Outlook manually (IMAP)

If automatic setup fails, you may need these settings from your email provider.

Setting	**Value**
Incoming server	IMAP server provided by your email provider
Port	993
Encryption	SSL/TLS
Outgoing server	SMTP server provided by your email provider
Port	465 (SSL) or 587 (STARTTLS)
Username	Your full email address
Password	Your email password or app password

Common Outlook problems and fixes

1. Outlook won't open

Try the following:

- Restart your computer.
- Start Outlook in Safe Mode:
    - Press **Windows + R**
    - Type:

outlook.exe /safe

- Disable problematic add-ins.
- Repair Microsoft Office.

---

2. Cannot send or receive emails

Possible causes:

- No internet connection
- Incorrect password
- Mailbox storage full
- Incorrect server settings
- Firewall or antivirus blocking Outlook

Solutions:

- Check your internet connection.
- Verify your account password.
- Update IMAP/SMTP settings.
- Remove and re-add the account.
- Check whether your mailbox has available storage.

---

3. Outlook keeps asking for password

Try these steps:

- Re-enter your password.

- Remove saved Windows credentials.
- Update Outlook to the latest version.
- Create a new Outlook profile if necessary.

---

4. Emails are stuck in the Outbox

Try:

- Ensure Outlook is online (not in **Work Offline** mode).
- Open the Outbox and delete or resend the stuck message.
- Reduce large attachments.
- Restart Outlook.

---

5. Search is not working

- Rebuild the Outlook search index.
- Restart Outlook.
- Update Microsoft Office.
- Check that Windows Search is running.

---

6. Outlook is slow

Possible fixes:

- Archive old emails.
- Disable unnecessary add-ins.
- Compact PST/OST files.
- Repair your Outlook data file.
- Update Outlook.

---

7. Cannot add Gmail

If using Gmail:

- Enable IMAP in Gmail settings.
- If your Google account uses two-factor authentication, create and use an App Password instead of your normal password.

---

8. Outlook data file is corrupted

Use the Microsoft Inbox Repair Tool (**SCANPST.EXE**) to repair PST files.

Basic troubleshooting checklist

- Restart Outlook.
- Restart your computer.
- Check your internet connection.
- Update Outlook and Microsoft Office.
- Verify your account credentials.
- Remove and re-add the email account if necessary.
- Create a new Outlook profile if the issue persists.

Additional help

For official Microsoft guidance, visit:

- Microsoft Outlook Support
- Microsoft 365 Support

If you're experiencing a specific issue, tell me:

- Your Outlook version (Outlook 2021, Outlook for Microsoft 365, Outlook on the web, or Outlook for Mac)
- Your email provider (Outlook.com, Gmail, Yahoo, Exchange, or another provider)
- The exact error message (if any)

I can provide step-by-step troubleshooting tailored to your situation.
