Remote Support: Quick Assist

Quick Assist is a built-in Microsoft Windows application that allows one person to remotely assist another by securely viewing or controlling their computer over the internet. It is commonly used by IT support teams, organizations, and individuals to troubleshoot computer issues.

Key Features

- Built into Windows 10 and Windows 11 (no additional remote desktop software required).
- Secure remote assistance using a Microsoft account.
- Screen sharing and remote control.
- Chat/message support during the session.
- Easy connection using a one-time security code.
- Supports User Account Control (UAC) prompts during assistance.

Requirements

- Both computers must have **Quick Assist** installed.
- An internet connection is required.
- The helper must sign in with a Microsoft account.
- The person receiving help needs the security code provided by the helper.

How to Connect

1. Open **Quick Assist** on both computers.
2. The helper selects **Assist someone** and signs in with a Microsoft account.
3. A one-time security code is generated.
4. The user receiving help enters the code and selects **Share screen**.
5. The helper requests **Take full control** (or view only).
6. The user accepts the request, and the remote support session begins.

Common Uses

- IT help desk and technical support.
- Troubleshooting Windows issues.
- Assisting family and friends with computer problems.

- Remote guidance and training.

Advantages

- Built into Windows—no third-party software installation required.
- Secure authentication using Microsoft accounts.
- Simple setup with one-time connection codes.
- Encrypted communication.
- Free to use.

Limitations

- Available only on supported Windows versions.
- Requires an internet connection.
- Both users must participate to start a session (unless other remote management tools are used).

Security Best Practices

- Share the security code only with a trusted person.
- Verify the identity of the person providing assistance.
- End the session immediately after support is complete.
- Never allow remote access to unknown or unsolicited callers.
- Keep Windows updated with the latest security patches.

Quick Assist is an easy-to-use, secure remote support tool for Windows that enables users to receive technical assistance without installing additional remote desktop software.
