Windows File Explorer is the built-in file management application in Microsoft Windows. It lets you browse, organize, and manage files, folders, and drives.

Main features

- **Browse files and folders** stored on your computer.
- **Create** new folders and files.
- **Copy, move, rename, and delete** files and folders.
- **Search** for files and folders.
- **Access drives** (C:, D:, USB drives, external hard disks).
- **View file properties**, such as size, type, and date modified.
- **Quick Access** to frequently used folders and recent files.

Common keyboard shortcuts

Shortcut	**Function**
Windows + E	Open File Explorer
Ctrl + C	Copy selected item
Ctrl + X	Cut selected item
Ctrl + V	Paste copied/cut item
Ctrl + A	Select all items
Delete	Delete selected item
F2	Rename selected file or folder
Ctrl + Shift + N	Create a new folder

Shortcut	Function
Alt + Left Arrow	Go back
Alt + Right Arrow	Go forward
F5	Refresh the current folder

Main parts of File Explorer

1. **Navigation Pane** – Shows drives, folders, and Quick Access.
2. **Address Bar** – Displays the current folder path.
3. **Search Box** – Searches for files and folders.
4. **File List Pane** – Displays the contents of the selected folder.
5. **Details Pane/Preview Pane** – Shows file information or a preview.

How to open File Explorer

- Press **Windows + E**.
- Click the **File Explorer** icon on the taskbar.
- Open the **Start** menu and search for **File Explorer**.

Example:
If you want to copy a file from the **Downloads** folder to the **Documents** folder:

1. Open **File Explorer** (Windows + E).
2. Open **Downloads**.
3. Select the file and press **Ctrl + C**.
4. Open **Documents**.
5. Press **Ctrl + V** to paste the file.
